1. Introduction and background

1.1 Background

In 2011, Denmark joined "Open Government Partnership" (OGP), an international initiative that works towards the promotion of good government and strengthening democracy by promoting transparent, inclusive government among the (currently 75) participating countries. The initiative is intended to ensure that public service and information are supplied in a timely and effective manner, to stimulate and support innovation and value creation in society as a whole and to strengthen knowledge, participation, transparency, cooperation and cohesion.

Denmark ranks high on international lists of openness and anti-corruption. In Transparency International's "Corruption Perception Index 2019", Denmark ranks as the least corrupt country in the world together with New Zealand, and in World Justice Program's "Open Government Index", Denmark ranks as the fourth most open country. The impressive rankings is more nuanced than at first sight. The rankings also indicate that Denmark has come a long way when it comes to openness and anti-corruption, but although Denmark has come a long way, we can become even better. We therefore need to stay focused on cooperation and participation to promote new initiatives (under OGP as well as outside the partnership) and on areas with challenges.

This report contains a final evaluation of the initiatives that were at the centre of Denmark's OGP action plan 2017-2019. Although Denmark in general is doing well in regards to openness and anti-corruption, several issues in the action plan period did, however, provide more nuances to that picture. Thus, trust in authorities has been weakened by various cases in recent years. In a 2018 survey, nearly three out of four respondents stated they generally had less trust in public authorities in the wake of i.a. the Danish bank Danske Bank's problems with money

_

 $^{^1}$ https://www.transparency.org/cpi2019 and https://data.worldjusticeproject.org/opengov/#/groups/DNK

laundering and the fraud case at the Danish National Board of Social Services². On that background, it is important that citizens feel that authorities and businesses "learn" from their mistakes to prevent similar incidents from happening again in the future.

Most of Denmark's initiatives in the OGP action plan are based on increased and improved public digitisation. The fact that there was a decline in 2019 in the share of citizens who trusted the authorities' handling of data (from 83 per cent in 2017 to 76 per cent in 2019) is therefore a point requiring special attention³.

The responsibility for continuously improving openness and trust is central as well as local. Centrally, the task is to set the right framework and conditions for all authorities to be able to exercise open and inclusive governance. Locally, the task is to use openness and inclusion to make sure that the citizens' needs form the basis and that solutions are developed in close cooperation with citizens.

1.2 Open Government effort to date

In addition to the Open Government action plan for 2017-2019, which is evaluated in this report, Denmark implemented two prior action plans. The first one was launched in 2012 while the second was launched in 2013 and was extended by two further initiatives in 2015. Furthermore, an Open Government action plan for 2019-2021 has been prepared.

1.2.1 The first action plan: Digitisation as a means of greater openness

In connection with Denmark joining OGP in 2011, it was decided to focus particularly on digitisation, which is also reflected in the first Open Government action plan. About half of the initiatives were based on the common public digitisation strategy for 2011-2015. The main focus was to improve digital public service

² https://www.altinget.dk/christiansborg/artikel/ugens-maalinger-danskernes-tillid-til-myndigheder-falder-efter-svindelsager

³ DST It-anvendelse i befolkningen 2017 (DST IT use in the public 2017) and preliminary numbers for It-anvendelse i befolkningen 2019 (IT use in the public 2019)

for citizens and businesses as well as improve transparency and accountability in public projects and processes.

1.2.2 The second action plan: Local democracy, digital communication and new forms of collaboration

In the second action plan from 2013, several of the commitments from the first action plan were carried on and developed further. The commitments were divided into four themes:

- Local democracy and participation
- Full digital communication and inclusion
- New forms of collaboration and involvement
- Open data innovation, transparency and enhanced efficiency

Some of the themes in the action plan for 2017-2019 build on the previous commitments. Among other things, the effort to create more open and useful quality data is developed further, for example by continuing the basic data programme as implemented in the second action plan. At the same time, the commitment to strengthening the framework for community work through a new civil society strategy, and the commitment to promote openness globally are carried on.

The Danish Open Government action plan 2017-2019 are covered 14 initiatives that were drawn up and implemented during the Third Cabinet of Lars Løkke Rasmussen. When reference is made to "the Cabinet" in the action plan and in this self-evaluation report, reference is therefore made to the Third Cabinet of Lars Løkke Rasmussen III.

1.2.3 The centre of the Open Government action plan 2017-2019

This report contains a final self-evaluation of Denmark's third OGP action plan. Its primary focal points are distributed over four themes. They are:

- More and better open data
- Tailored data to ensure a basis for citizen participation
- Working together for a better public sector
- A global effort for openness

1.3 Involvement in Denmark's OGP effort.

As a citizen or a civic society organisation, you have the opportunity to get informed and be a part of the Danish involvement in the OGP. A short description of the opportunities is provided below:

- Website: A national OGP website has been created at digst.dk/ogp, containing information about the Danish involvement in OGP. The website is up-dated with news continually, so anyone interested can find out about and get involved with the drafting and evaluation of action plans. The website also contains contact information about the Danish OGP point of contact, whom you are welcome to contact.
- OGP network meetings: Open OGP network meetings allow people to participate in the Danish involvement in the OGP. Network meetings are held in connection with the drafting of action plans and self-evaluations hereof, where all interested parties have the possibility to engage in dialogue with the initiative owners, civil society and the Danish OGP point of contact from the Danish Agency for Digitisation. As a supplement to the physical network meetings, an online forum about Open Government has also been set up at digitaliser.dk⁴.
- Access to action plans: The current and all previous action plans are available
 at digst.dk/ogp. The action plans, as well as mid-term and final self-assessment reports, are available in both Danish and English.
- *Document repository:* A document repository has been created at digst.dk/ogp, which contains essential documents about OGP.

⁴ https://www.digitaliser.dk/group/3647348

Consultations: Consultations about action plans and self-assessment reports
take place via høringsportalen.dk and in an online forum at digitaliser.dk6.
Here, it is possible to participate in the debate if you do not have the opportunity to take part in the OGP network meetings.

2. The four themes for the OGP action plan 2017-2019

2.1 Theme 1: More and better open data

As part of their governance, public authorities collect and generate vast amounts of data that can create value if released for public use. Data may contribute to knowledge about key societal issues, such as geographical data, and provide insight into, and create transparency about the work of public authorities. A great effort has already been put into releasing data for free use, and this must be continued. However, this effort cannot stand alone. Equally important to releasing data is to ensure that the data released is accurate and of high quality so that it can be connected with other types of open data. The action plan clarified how an effort should be implemented in the action plan period to increase the quality of the public data made available. To support the effort, various activities and events were carried out to draw attention to the value of using data.

2.2 Theme 2: Tailored data to ensure a basis for citizen participation

The effort to release data for public use and the generally increasing digitisation level mean that there will be a natural increase for data produced by public authorities. On the one hand, this creates a massive potential for using digital tools to increase transparency and include citizens in the service delivered by public authorities. On the other hand, the development entails a risk that citizens experience difficulties navigating the increasing volumes of data. In order for data to create value, it is necessary to make efforts to ensure that data is well defined and accessible to the citizens who need it, when they need it. As part of the action plan, an

effort will be made to create a basis for tailoring data to the individual citizens and to ensure that data can be used to include citizens in authorities' workflows.

2.3 Theme 3: Working together for a better public sector

Civil society possesses valuable ideas and knowledge that can contribute to increasing the quality of the service that public authorities provide as well as collaborate with public authorities to solve community problems. As part of the action plan, it was therefore decided to implement an effort to support involvement of the ideas and knowledge of the civil society. The action plan also clarified that involvement should be in connection with solutions to specific and current problems as well as through the establishment of a continuous dialogue on the future society and the service provided by the public sector.

2.4 Theme 4: A global effort for openness

Denmark works to promote transparency and openness globally through our development cooperation. The knowledge and experience Denmark has acquired in the area can be shared with other countries as part of a collaboration to ensure good governance in a broader sense. This takes place as part of country programmes in Denmark's programme cooperation countries. The transparency and openness agenda was also the centre in connection with Denmark's status as host country for the International Anti-Corruption Conference 2018, see initiative 4.2. Content, purpose etc. for each initiative are listed in table 2, section 5.2 of this report.

3. Process for development, implementation and evaluation of the action plan

Public consultations in connection with the drafting of the action plan

The 2017-2019 action plan has been drafted on the basis of close coordination between various public sector authorities and a dialogue with a number of civil society organisations.

Based on a publicly available timetable, a public consultation was conducted from June to August 2017 at www.hoeringsportalen.dk, where the public had the opportunity to contribute and provide input to the action plan. Through the consultation, contributions were received from Open Data DK, the Danish National Archives and OS2, of which the first two were adopted as initiatives in the action plan. In parallel with the consultation, a debate forum was set up on digi-taliser.dk. Throughout this process there has been a website on digst.dk, providing information about the timetable and updates on the consultation. The site was continually updated about the subsequent process.

Dialogue meetings as a supplement

As a supplement to the consultation, a series of dialogue meetings were held during August 2017 with civic society organizations and other parties, with the aim of providing input to the work of the action plan and to discuss Denmark's Open Government initiative in general terms. Participants at the dialogue meetings included Transparency International Denmark, the National Centre for Public Sector Innovation (COI), Open Knowledge Denmark and Aarhus Municipality. A short news item about these dialogue meetings was published on digst.dk/opp immediately afterwards.

(IRM recommendations)

Involving civil society in the form of the consultation processes was valuable as involving stakeholders is decisive to a successful process and action plan. In accordance with OGP's recommendations, an OGP network was established. However, creating an interest in participating in this network proved challenging. Independent Reporting Mechanism's evaluation of Denmark's previous action plan resulted in the following recommendations:

- 1. Extend the inclusion of the OGP process and the physical commitment by involving a more versatile stakeholder group.
- 2. Include obligations concerning the financing of political parties.

- 3. Include obligations concerning the regulation of lobbying.
- 4. Include obligations concerning reforms relating to access to information.

With the 2017-2019 action plan, the recommendation to extend the degree of inclusion in the OGP process has been fulfilled, as OGP network meetings are now held on an ongoing basis. As for the other recommendations, a change to political party support legislation was announced in August 2017⁵.

4. Final evaluation of each initiative

5.1 Adjustment of initiatives during the action plan period The final evaluation of the implementation of Denmark's OGP action plan were done based on self-evaluations that had been prepared by the authorities and institutions with the primary responsibility for implementing each initiative.

Since the launch of the 2017-2019 OGP action plan, the following adjustments have been made to the initiatives:

Initiative 1.1 More open data for citizens and the media

- The "Publication of data in a freely available data catalogue" milestone is achieved by referring users to search and order data from the Danish National Archive's user services, out of consideration of the maintenance of data security and user tracking option, which are derived from the clarification of needs in relation to IT support
- The production of the video presenting the Danish National Archive OGP initiative was changed to an instructive video about data searches and ordering, due to a change in the way the data is published.

-

⁵ https://www.retsinformation.dk/Forms/r0710.aspx?id=192410

Initiative 1.2 Basic data records to be available on the shared public distribution platform

- The final reporting regarding making basic property and personal data available was delayed for three months due to technical challenges. In addition, a new schedule for the basic data programme caused all basic geodata not being available until Q2 2019.

Initiative 1.3 Information portal for the daytime childcare options sector

- The end date for the technical development of the portal was moved from the first half of 2018 to the second half of 2018.

Initiative 2.2 Nationwide dissemination of telemedicine

- The milestone "Telemedicine for pregnant women with complications has been disseminated to all maternity departments" was mistakenly set to conclude at the end of 2019. The correct date for this should have been the end of 2020. This mistake was corrected.

Initiative 3.1 National strategy for a stronger civic society

- The description of the initiative was changed, reflecting the agreement from the Rate Adjustment Pool for the social sector 2018- 2021, instead of the commission for the task force for a stronger civic society.

Initiative 3.2 Report a regulation

- The start date for the mid-term follow-up was changed from December 2017 to November 2017, the end date being set to December 2017.
- The start date for the final follow-up on the campaign was changed from May/June 2018 to 5 March 2018, while the end date was set to 25 March 2018.

Initiative 3.3 Open Government Partnership Forum

- The description of the initiative was adjusted, the framework for the forum having been amended to being an open network.
- The end date was changed from 30 June 2018 to 31 August 2018.

- The "mapping of potential members" milestone was changed to "Preparations way of working and membership group".
- The "Dialogue with potential members" milestone was removed, as the forum has been established as an open network.

Initiative 4.3 IATI (International Aid Transparency Initiative)

- The start date for each milestone in the initiative was mistakenly placed under the "end date" category, the end date not being specified. This error was adjusted so that the milestones had a correct start date, and end dates was added.

5.2 Evaluation of the initiatives

The evaluation report includes a final evaluation of the initiatives from the action plan that expired at the end of June 2019. All initiatives from the action plan were initiated, and 11 out of 13 initiatives have been significantly or fully implemented. Only two out of 13 initiatives have been implemented to a limited degree.⁶ The below table 1 shows the level of implementation for the respective initiatives. The categories mentioned were established by OGP as part of the evaluation process.

1 f the implementation level of initiatives					
Limited	Significant	Concluded			
Initiative 4.1	Initiative 1.1	Initiative 1.2			
Initiative 4.3	Initiative 1.5	Initiative 1.3			
	Initiative 2.1	Initiative 1.4			
	Initiative 2.3	Initiative 2.3			
		Initiative 3.2			
		Initiative 3.3			
		Initiative 4.2			

Note: Initiative 3.1 is not listed in the table as the initiative runs until 2021.

_

⁶ Initiative 3.1 is not included here as the initiative runs until 2021 and therefore goes beyond the period for the third action plan.

The evaluations of the action plan initiatives follow the same structure as the action plan 2017-2019. Thus, the initiatives are distributed over the four themes around which the action plan was built. Below are the responsible authorities' self-evaluations of each initiative. The responsible authorities have prepared self-evaluations based on the OGP evaluation template.

Theme 1: More and better open data

Initiative 1.1 More open data for citizens and the media

2017 – mid 2019						
Responsible	The Danish National Archives					
Which social problem	The Danish National Archives possess a large collection of documents and data

Description of results

It has been chosen to select about twice as many data sets as originally planned to illustrate the comprehensiveness of the Danish National Archives' collection compared to the supply of open data. 18 data sets. An alternative form of data transmission has been found in the light of the GDPR implementation in May 2018 and accordingly increased parsimony in relation to data for download. Open data must be ordered according to current procedures of the Danish National Archives.

For the presentation of data at www.sa.dk (website of the Danish National Archives), thematic categories are followed at the European Data Portal. Data sets are provided within relevant themes in the form of minimum one (research) data set that illustrates the public's opinions/attitudes and an administrative data set in the form of a register/statement that relate to the EDP theme, for example 'Transport' and 'Health'. To support use of open data, motivational questions have been drafted about the user's interests, if any, within a given theme, for example 'Transport' and 'Health'.

Next step

The page 'Open data', presenting OGP, the initiative of the Danish National Archives and the selected data sets, presentation of metadata, motivational questions for the use of data and easy access to ordering data must be established. A draft of the presentation is ready for implementation.

Activities or milestones with			
verifiable deliveries	Start date	End date	Completion status
Selection of 10 data sets in a dialogue with stakeholders	1 August 2017	1 June 2018	Concluded. Ex- tended number

Initiative 1.3 Information portal within the daytime childcare options sector 2017-2019

2017-2019	
Responsible author-	The Danish Ministry of Children and Education
Which social problem	Previously, parents only had access to a few, select information, often not com-
does the initiative ad-	parable, about each childcare institution and childminder. Parents therefore often
dress?	had an insufficient basis to compare daytime childcare options and find just the
	one that would match their child and family.
What is contained in	One combined platform is developed in the form of an information portal (Dagtil-
the initiative?	budsportalen (the daytime childcare portal)) that collects data from municipalities
	and daytime childcare options across the country and presents it in public, easily
	accessible displays, the so-called dashboards, so that parents can make an in-
	formed choice based on the factors that are important for their family.
	Work will continuously be put into making it possible to publish the information at
	institution level and, where possible, unit level. For that to be possible, it must be

possible to link existing data from various registers more precisely to each other. A daytime childcare register will be established in 2019. How will the initia-The platform will create more transparency and openness within the daytime tive contribute to childcare sector via better communication of relevant key figures about each daysolving the social time childcare option. The goal of the information portal is to ensure that all famiproblem? lies will have access to comparable information about each daytime childcare option. At the same time, the combined entry point will ease prioritising and ensure a targeted management of the daytime childcare sector for leaders and decisionmakers in the municipalities. Why is the initiative The information portal will ensure comparable information combined at one relevant in relation place, displayed in an easy and well-arranged way. This will ensure transparency to the OGP values? within daytime childcare options. Thus, citizens will be more capable of making decisions based on information about the public administration. **Further information** Link to the entire daytime childcare agreement listing all initiatives: https://www.regeringen.dk/publikationer-og-aftaletekster/staerke-dagtilbud-alleboern-skal-med-i-faellesskabet/ **Completion status** Not commenced Limited Significant Concluded Х Description of the Based on the preliminary analysis and the political announcements during the results negotiations, it has been decided that the following mandatory and voluntary information will be presented at the portal: Staffing: Presented as mandatory information Number of trained staff members: Presented as mandatory infor-Number of children in total: Presented as mandatory information Share of children of non-Danish origin: Presented as mandatory infor-Opening hours: Presented as voluntary information Closing days: Presented as voluntary information Trained educational profile: Presented as voluntary information Meal system: Presented as mandatory information Distance to daytime childcare: System-generated information drawn based on the institution count Link to the registration systems of each municipality The Danish Agency of IT and Learning manages the initial and ongoing technical development, operations and technical maintenance of Dagtilbudsportalen. The project has been implemented in the form and to the extent that had been agreed between the prior Danish Ministry of Children and Social Affairs and STIL. The portal is available at this address: https://uddannelsesstatistik.dk/pages/dagtilbud.aspx Next step Once the municipalities have implemented the new Dagtilbudsregister in their electronic journal systems, data can be collected at institution and unit levels. The statements in the daytime childcare portal can then be displayed at institutional and unit levels. That work is anticipated initiated in 2022.

	initiative description							
Which social prob-	Each day, the public sector generates large amounts of data about e.g. traffic, park-							
lem does the initia-	ing, pollution, culture and demography. This data has much, unexploited potential.							
tive address?	Denmark is one of the countries in the world where the most data and statistics are							
	assessed and stored systematically: Public as well as private players are in charge							
	of data production and collection. By making data sets available to businesses, citi-							
	zens and other public authorities to a greater extent, opportunities for increased							
	growth and innovation in society are created.							
	,							
	Open, public data is relevant because it can be used as a raw material in the devel-							
	opment of e.g. applications and services for the benefit of citizens and businesses.							
	It can provide politicians with new and better knowledge of their municipality and its							

development, thus improve the basis of decision. It may be a source to increased involvement of citizens and co-creation as it gives civil society a new possibility of being involved and being part of creating a better town/municipality/region.

Data-driven solutions give the possibility of using new technology that improves and streamlines the core tasks, which the municipalities solve for the citizens - the so-called Smart City solutions.

What is contained in the initiative?

A number of efforts were completed in the initiative, divided between several projects to support the work of the municipalities with open data and increase the use of open data:

- Assistance to the municipalities
- Support interpretation and standardised displaying of data
- Increase transparency and possibilities of using data for businesses as well as citizens
- Knowledge sharing of new, data-driven solutions

The following activities were completed as part of a Smart City initiative:

- Intro events about Smart City with a practical and down-to-earth focus on ways to initiate Smart City in your municipality and with a definition of "small success stories" that are easy to initiate.
- Development of a Smart City Map of Denmark for listing Smart city solutions in Denmark, particularly in the municipalities. Citizens and other actors must be able to enter projects/solutions.
- Best practice guidelines within Smart City solutions that will be usable to a number of municipalities.
- Workshops on professional topics. Cooperation with schools and universities.
 There is special interest in sharing knowledge, upgrading or bringing local knowledge institutions into play in the solutions.

As part of an initiative on better use of municipal data, the following activities were completed:

2017

- Two open data introductory seminars in the autumn of 2017 of which Open Data DK was in charge.
- Two broad data days in the autumn of 2017. The data days were a collaborative project and also played a part in the regional work for the municipalities on Zealand in connection with the 'Ready for smart growth' project.
- The opportunity of releasing intermunicipal data sets is being examined.
- A strong, technical foundation was initiated for the municipalities in their work with open data.

2018-

Strategic inspiration for municipal leaders with i.a. international inspirational presentations. The project singled out overall data areas that will function as guidance for the municipalities in their open data work. "Little success stories" and good stories were brought into focus. Work was done on creating a strong, technical foundation for the municipalities in their work with open data. There was a request for a larger event with municipal use cases with an urban focus and a village/open land focus. Focus was on ways that open data can contribute to new/improved solutions in the urban open space and how it can improve the citizens' experience of being in the urban open space. 2019-The project included work on five overall data areas that will function as guidance for the municipalities in their open data work. Work was done on creating a strong, technical foundation for the municipalities in their work with open data. Within the framework of the Smart City Forum, four projects have been initiated with intermunicipal solutions. The four projects are: Let Parkering (Easy Parking) **Smart Mobility** o Traffic flow in roundabouts and intersections Street lights and behaviour All projects prioritised inclusion of the entire country and all types of municipalities. The projected included free intro seminars open to all, offering the citizens inspiration to ways to use the freely accessible data. The project provides technical assistance to the municipalities so that also small municipalities are supported in being able to enter data as open data. How will the initia-The projects supported the use of networks, analyses and competence developtive contribute to ment to give the municipalities a better understanding of the value of open data and solving the social cooperate on smart solutions. Among other things, this is thought to bring about problem? more open, municipal data, which contributes to giving civil society increased possibilities of using it in various services but also insight and a source to citizen involvement. Why is the initiative The project on better use of municipal data highly supports transparency and openrelevant in relation ness in the public sector. Furthermore, open data is a source to increased citizen into the OGP values? volvement and co-creation as it gives civil society the possibility of being involved and being part of creating a better town/municipality/region. Initiative 1.5 Open Data DK

2016 -	Opon Bala Bit
Responsible au- thority	Open Data DK
Which social pro	b- Releasing the authorities' data in connection with the development of
lem does the init	ia-towns and regions is valuable. With open, public data, all interested
tive address?	parties have the possibility to do services or projects that cover a need
	among the citizens - and that businesses and entrepreneurs can make
	money on. Open data can contribute to creating new projects and ser-
	vices or to improving existing ones - for the benefit of the citizens.

At the same time, open data can create increased transparency in the public administration so that citizens and businesses can become even more active co-players in our democracy.

Furthermore, Open Data DK responds to the challenge caused if all municipalities and regions put out data individually. That would cause disorder and a mess of unstandardised data, which in no way aids the use of the data released. Finally, Open Data DK also supports the intermunicipal and common public initiatives within the open data area.

in the initiative?

What is contained Open Data DK assists municipalities and regions in initiating work on open data. It is a new area in many municipalities and regions, and it may therefore be difficult to fully grasp. Open Data DK sets the framework for knowledge sharing on open data between public authorities and businesses.

> The purpose is to create transparency in the public administration and breeding grounds for data-driven growth by making data freely accessible for public authorities, private companies and the general civil society. Municipal and regional data are made open and freely accessible on a common data platform (open source) so that it can be easily accessed and used as raw material in the development of applications and services or form the basis for analyses, trend assessments, research etc. Open data can improve increased transparency in the public administration so that citizens and businesses can become even more active co- players in their local democracy.

> A number of initiatives will be implemented in the autumn of 2017 and in 2018 to aid the display and use of public data. The initiatives include i.a. the following:

- Information meetings for municipalities and regions, which specifically are about releasing data held by the municipality/region. How do you get started? What are the potentials of open public data?
- Individual introductory meetings for new municipalities and regions.
- Update and development of existing guidance material.
- Inspirational and dialogue meetings with businesses.
- Development of the open data platform with initiatives that make it easier to release and use data, i.a. with focus on standardisation of data.
- Cooperation with educational institutions.

In 2019, initiatives were also completed for the purpose of aiding the display and use of open public data.

- Dialogues between businesses and authorities
- Introduction of basic membership for municipalities
- Establishment of intermunicipal data sets from 65 municipalities and the Danish Road Directorate

- Focused work regarding five common data sets
- Open Data challenge with focus on mobility and tourism
- Development of a data refinement engine as a condition for the visualisation of data, thus better transmission of already open data.

40 municipalities, two regions and partners such as the Danish Business Authority and Local Government Denmark currently (2019) participate in the initiative. In addition to the participation of public authorities, there is also much focus on involving businesses and citizens, i.a. in the form of dialogue meetings, hackathons, challenges and cooperation with educational institutions.

tiative contribute to solving the social problem? Why is the initiative relevant in relation to the OGP values?

How will the ini-

The Open Data DK initiative contributes to creating an open public sector by releasing data, thus forming the basis for cooperation between the public and private sectors, citizens, trade and industry and knowledge institutions on development and innovation processes.

Open data gives everybody free access to information about the public sector, and in this way, Open Data DK contributes to ensuring a more open and transparent public sector in which it is possible for the civil society to participate.

Open Data DK is also based on the involvement of stakeholders. That is an important part of the initiative work as it gives them knowledge about which data is in demand and for which data there is a need - e.g. among businesses. Open Data DK has often set the framework for a direct dialogue between public authorities and businesses about open data.

Thus, Open Data DK is a help in getting municipalities/regions to start working on open data and obtaining more knowledge about the need on the one side and making it easier for businesses and those with an interest in data to get a dialogue with the public about open data on the other side.

Further information

Open Data DK is financed by membership fees of DKK 20,000 per year per member.

Open Data DK is a partner in initiative 5.1 in the common public digitisation strategy 2016-2020 where a partnership for open public data has been established with the Danish Business Authority, Danish Regions, Local Government Denmark and Open Data DK.

Open Data DK is part of the steering group for initiative 3.4 in the Common Municipal Digitisation Strategy.

In cooperation with the Danish Business Authority, Danish Regions and Local Government Denmark, Open Data DK focuses on legal problems in opening data and how to manage them.

Theme 2: Tailored data to secure the basis for citizen involvement

Initiative 2.1 List of own cases and services

Responsible au- thority	Danish Agency for Digitisation
Which social prob-	The authorities currently receive many inquiries from citizens and businesses that
lem does the initia-	would like to know status of pending cases, status regarding payment of benefits
tive address?	and other accounts with the public authorities. Furthermore, the authorities would like to provide better service to the citizens through personalised data, including insight into data about the citizens. Citizens and businesses can gain access to such information through a common public case and benefit overview, thus more security in relation to their accounts with the public authorities.
What is contained	A common public reference architecture for the case and benefit overview is being
in the initiative?	developed. Coherence in the data display across Danish authorities is ensured by
	using the common public architecture so that citizens can get a combined overview
	of e.g. cases and benefits for which the authorities are responsible. Thus, authori-
	ties can develop overview solutions individually and together. The national portals
	borger.dk and VIRK are obliged to show the data that the authorities want to display via the overview.
	In 2017 and later, a common reference architecture is being developed which au-
	thorities can use. In 2018 and until 2020, authorities will use pilot projects to de-
	velop the overview and show relevant data to citizens and businesses.

Initiative 2.2 National dissemination of telemedicine

Responsible authority	Danish Agency for Digitisation
Which social problen	There is currently an increased demand among citizens and relatives regarding
does the initiative address?	-more involvement in the treatment so that treatment can be adapted to the needs of the citizens and not the needs of the system. Furthermore, the demographic development is challenging to the healthcare system where more people will have to be treated within the existing financial framework.
What is contained in the initiative?	The government agreed with Local Government Denmark and Danish Regions that telemedicine for pregnant women with complications and patients with COPPD must be disseminated as a treatment option throughout the country.
How will the initia- tive contribute to solving the social problem?	By agreeing with municipalities and regions on the dissemination of telemedicine for patients with COPD and pregnant women with complications, the Danish government hopes to be able offer treatment closer to the citizens. Studies showed that telemedicine treatment strengthens the citizens during the course of treatment and increases their self-interest in treatment.
	Furthermore, telemedicine contributes to a more effective treatment, thus to over- coming problems related to the demographic challenge involving more elderly and more chronic patients, including rapidly increasing healthcare expenditure.
	Finally, common public agreements on the dissemination of telemedicine contributes to best practices being applied throughout the country.
Why is the initiative relevant in relation to the OGP values?	The initiative is relevant as it contributes to strengthening the citizens during the course of treatment in their own home, giving the citizens better insight into their

Initiative 2.3 Min Log (My Log)

2017-2019

Responsible author-

Danish Ministry of Health and the Elderly

Which social problemFor the past ten years, Danish regions have invested in having digital solutions does the initiative ad-implemented in the entire healthcare system. Working procedures at hospitals,

with general practitioners and in the municipal healthcare have been highly digitised, and medical records on paper have been replaced by electronic patient records and digital communication. To achieve increased transparency and openness among healthcare professionals, certain health data is available in a common health record. This data consists of i.a. health records from hospitals, medicine cards and lab results.

Registering all access to health data is compulsory in Denmark. The log is an important tool to ensure legal access to health data. The Danish Health Act applies to the logging of access in relation to patient information in patient records, and the general legal data protection rules and standards apply to the logging of access to other patient data. In step with the digitisation of working procedures, securing the citizens' privacy and processing health data in accordance with the law are important. Only healthcare professionals that treat a patient are allowed to access and use data regarding the relevant patient.

Thanks to the common health record, healthcare professional can process selected patient information across the healthcare sector regardless of the geographical area. All access is logged, and some of these logs are available to citizens in the shared registration solution that is called Min Log. That registration makes it possible for patients to check inquiries in their common health record and check whether there have been incorrect or suspicious inquiries. The public logging of the health record applies to inquiries in the health record via hospitals, inquiries in Fælles Medicinkort (Common Medicine Cards), lab results, appointments and vaccines via the website sundhed.dk. However, logging from the hospital's own electronic patient record system is not available to the citizens.

the initiative?

What is contained in It was agreed in the 2018 annual budget agreement between the government and regions that work with data security should be highly prioritised and further strengthened to ensure confidentiality (thus security) of sensitive personal information together with a high level of security in the digital infrastructure. This includes ensuring increased transparency in the access to the citizens' health data.

> On that basis, it was agreed that the regions are obliged to ensure that citizens can review digital loggings in future adjustments of the electronic patient record, also when data is processed/accessed via the hospitals' internal systems. Furthermore, it must be examined how to make a common public, user-friendly solution available to citizens via the website Sundhed.dk. One of the purposes of Sundhed.dk is to gather all health-related information the same place, for example, where patients have access to information about their health record, healthrelated treatments at hospitals, lab results, vaccines, prescriptions etc. In addition to access to health data, sundhed.dk also contains information about healthcare benefits, hospitals, health apps, illnesses etc.

Theme 3: Working together towards a better public sector

Initiative 3.2 Report a rule

October 2017 – Februa	ary 2018
Responsible authority	Danish Ministry of Finance
Which social problen	nCitizens, businesses, trade organisations etc. were involved in the work towards
does the initiative ad-	-creating a more coherent and effective public sector. Thus, the initiative sup-
dress?	ported the Coherency Reform of the previous Third Cabinet of Lars Løkke Rasmussen that aimed to create a more coherent service for citizens and businesses, i.a. via simplification of rules and debureaucratisation.
What is contained in the initiative?	The initiative was completed as a political campaign that ran from October 2017 to February 2018. 'Mailboxes' were set up at the websites of the involved ministries for the purpose of enabling citizens, businesses, trade organisations etc. to submit their proposals to debureaucratisation of the public sector. The ministries screened the proposals received and assessed whether the proposal could give rise to change laws, orders, rules, procedures etc. The overall purpose of the initiative was to ensure involvement of citizens, businesses, trade organisations etc. in the effort towards creating a more effective public sector.
How will the initia- tive contribute to solving the social problem?	The purpose of being able to submit proposals was to contribute to enabling citizens, businesses, trade organisations etc. that have experience with the consequences of government rules and requirements in practice to contribute with relevant proposals for simplification of rules and debureaucratisation. The implementation of standardised mailboxes at the websites of the ministries during the comparing period made it simple for the parties to contribute with pro-
	during the campaign period made it simple for the parties to contribute with proposals, which could subsequently be handled by the individual ministry. The screening of the proposals received made sure that the proposals were handled by the correct relevant department and that a stance was actively taken on how to consider the proposal.

Theme 4: A global effort for openness

Initiative 4.1 Anti-corruption and transparency in Denmark's Country Programme for Uganda

2018 - 2022	
Responsible au	uthor- The Danish Embassy in Kampala
Which social p	roblemCorruption in Uganda is systematic as well as endemic, and although much work
does the initiat	ive ad-has been done to limit that tendency, numerous corruption scandals continue to
dress?	appear at a high level. According to Uganda's National Development Plan II,
	"corruption impacts the poorest sections of society disproportionately, and gener-
	ally benefits those already in positions of power and authority".

Promoting political inclusion is therefore very important. That requires for the primary democratic government institutions and mechanisms of change in civil society to be identified and brought together in constructive and responsible partnerships to aid due process, transparency, democracy and observance of human rights. Powerful partnerships between holders of rights and obligations have the potential to make the state more responsible to its citizens and to improve ser-

the initiative?

What is contained in Denmark - in close cooperation with other development partners - wants to use the country programme to support the most important state and private stakeholders and their partnerships, thereby promoting a more responsible, inclusive and stable society that includes initiatives within:

- Democratic Governance Facility (DGF)
- Financial Management and Accountability Programme (FINMAP) which is continued in 2019 by a new programme: the Resource Enhancement and Accountability Programme (REAP)
- Inspectorate of Government (IG)
- Control mechanisms to fight corruption in the country programme

How will the initiative contribute to solving the social problem?

The country programme for Uganda builds on the expectation that an increase of public demand for inclusion, transparency, democracy and respect for human rights with more powerful public institutions is the foundation for a more responsible, inclusive and sturdy society.

DGF provides support to the Ugandan civil society with focus on: 1) Strengthened democratic processes to comply with the citizens' rights, 2) A higher degree of due process and the right to judicial review for all citizens 3) Increased protection and observance of human rights and equal rights and 4) Improved inclusion and involvement of citizens in the decision making processes.

Support to the IG supervision will contribute to giving key players a more powerful role in strengthening good governance, responsibility and due process in public offices. The Danish support will focus on 1) increased public awareness of the functions of the supervision and strengthened partnerships with strategic partners, including local authorities and the private sector, 2) stronger local presence, including more effective procedures and work processes, to strengthen and continue the establishment of a number of decentralised institutions which have led to an increased number of complaints and cases and 3) optimisation of the IG Ombudsman's role in peer training through partnerships with the Danish Ombudsman Institution. Furthermore, a friendship arrangement is anticipated between Uganda's Directorate of Public Prosecution, the Danish State Prosecutor for Serious Economic and International Crime and the Danish Director of Danish Prosecutions to strengthen investigation of comprehensive corruption cases.

The FINMAP programme worked as the primary implementation foundation for the reform strategy for Uganda's management of public finances (PFM). In June 2019, FINMAP's successor, REAP, was launched. Danish support to FINMAP and REAP will be an incentive for an improvement and full implementation of Uganda's legislative and institutional mechanisms for the management of expenditure and revenue. This will strengthen an effective and responsible use of

public resources, thus ideally providing better results and services across all sectors which is fundamental for an inclusive economic and social development.

Control measures regarding the fight against corruption: All partners in the development initiative under the country programme will receive an introduction to Danida's anti-corruption policy, including clear guidelines for requirements for prevention, registration and reporting when implementing activities with Danida funds. The Danish Embassy in Kampala will also invite all partners to a workshop about the fight against corruption and offer online courses within that area. All partners in the development initiative have gone through a thorough pre-assessment that showed possible capacity shortages, risk areas and measures to fight corruption that are applied by the partner. The Danish Embassy in Kampala has a cyclical common financial management plan that builds on a detailed and prioritised risk assessment of the initiatives, and at least once a month, common visits will be paid to each partner to control management of public finances. Furthermore, the need to examine the yield from the investment and special audits, e.g. purchasing, will be established each year in connection with the planning of the annual audit.

Why is the initiative relevant in relation to the OGP values?

Through FINMAP, the government of Uganda launched a budget website (http://www.budget.go.ug/) and a hotline to promote transparency and responsibility in the use of public funds by giving the public access to information and the possibility to give feedback on national and municipal budgets and performance. Uganda's Ministry of Finance often sends out budget information through the local daily papers when the quarterly reviews are published for the recipient country. Furthermore, there are frequent press conferences to give an account of the budgets. This is to make the public aware of the need to follow up on the implementation of the activities.

Uganda's Ministry of Finance often sends out budget information through the local daily papers when the quarterly reviews are published for the recipient country. Furthermore, there are frequent press conferences to give an account of the budgets. This is to make the public aware of the need to follow up on the implementation of the activities.

While FINMAP focused on the debit side of the public finances, REAP instead focuses more on increasing the ability to effectively collect a tax revenue. Uganda has the lowest tax-to-GDP ratio in East Africa. Among other things, REAP focuses on resource mobilisation, including effective income strategies and long-life administration of public debt and the state budgeting

The Danish support to IG focuses on improving the mechanisms to ensure the officials' responsibility. This includes the structure of the investigators' and the prosecution's possibilities to investigate and prosecute officials who are accused or suspected of having exploited or appropriated government funds/resources. This also covers current investigations and prosecution of officials.

Further information

The country programme has also been adapted to the Sustainable Development Goals (SDGs), particularly SDG 1 (No poverty); SDG 5 (Gender equality); SDG 8 (Decent work and economic growth); SDG 10 (Reduced inequalities); SDG 16 (Peace, justice and strong institutions); and SDG 17 (Partnerships for the goals).

Initiative 4.2 18th International Anti-Corruption Conference

25 September 2017 – .	22 October 2018
Responsible author- ity	The Ministry of Foreign Affairs
Which social problem	Corruption limits the possibilities for democratic and economic development. It
does the initiative ad-	-distorts the political process and limits the citizens' democratic rights, reduces ac-
dress?	cess to and the quality of public services, makes public procurement more ex-
	pensive, causes fewer collected taxes and dues, makes conditions for the private
	industry more difficult, undermines enforcement of law and order and, in the
	worst cases, provides a breeding ground for riots, radicalisation and civil war.
What is contained in	In 2018, Denmark hosted the 18th International Anti-Corruption Conference that
the initiative?	was arranged in close cooperation with Transparency International. The confer-
	ence had a high-level segment with participation at minister/deputy minister level
	from more than 20 donor countries and developing countries and leaders from a
	number of central, international organisations. The purpose of the high-level
	meeting was to strengthen common work and to launch national actions to fight
	corruption with associated operational follow-up, including initiatives within trans-
	parency in the public sector.

	The birth level accuse	ent resulted in acti	on plans from 19	countries and 12 interna-

5. Experience sharing with other countries

As part of the ongoing experience sharing, Denmark participated in the OGP summit in Canada in 2019. Representatives from the public administrations in Denmark, Norway, the Netherlands, Estonia, Iceland, Finland and England met to discuss work with the respective countries' OGP action plans and the general OGP effort. At the meeting, Denmark's PoC (Point of Contact) exchanged expe-

riences and discussed common challenges with PoCs from other member countries. This happened in a formal setting during discussions arranged by the OGP secretariat but also in informal settings during ongoing bilateral meetings. It was also a good forum to discuss the countries' previous involvement under the OGP, and there was room to gather inspiration to the work with Denmark's future action plan 2019-2021. At the same time, there was also an opportunity to hear about the other OGP members experience with involving civil society in the network cooperation and with establishing open online databases for reporting on initiatives.

Furthermore, the Danish Agency for Digitisation as well as the Ministry of Foreign Affairs both participated in activities as part of the experience exchange to spread knowledge and best practice across countries. The Danish Agency for Digitisation participated in meetings with Sweden, Norway, Finland, Iceland, Estonia, Germany, the Netherlands and Scotland to share ideas for and experience with establishing openness across countries. Furthermore, the Danish Embassy in Kampala has had a continuous dialogue with Uganda's government as part of initiative 4.1 on anti-corruption and transparency to promote a more responsible, inclusive and stable society.

6. Conclusion

The action plan for 2017-2019 focused on four general themes: More and better open data, tailored data to ensure basis for citizen involvement, joining forces for a better public sector and a global effort for openness. In general, the action plan has shown good progress. Most of the initiatives in the action plan have either been completed or concluded. Note that the only initiatives that were completed to a limited extent belong under theme 4 - a global effort for openness.

The action plan for 2019-2021 builds on the work from the action plan for 2017-2019. Thus, the most recent action plan contains initiatives that support the wish for open and tailored data and/or increased trust in the public sector. The wish for open data has been addressed in the Danish Working Environment Authority's

Efficiency's common public cooperation on terrain, climate and water data and the Danish National Archives' opening up of data and the opportunity for free and easy delivery of data. Similarly, the work with My Overview aims to provide citizens with a tailored, digital overview of basic data, cases pending at public authorities, granted economic benefits, planned agreements and deadlines etc. The Work with My Overview is expected fully implemented in 2024. My Overview is also expected to contribute to increased trust through transparency as the citizen will gain insight into the data that the public authorities have registered about the person in question. The National Social Appeals Board is also expected to contribute to increased public trust through the initiative on an independent due process unit. Previously, there was a high reversal percentage for appealed cases about municipal decisions, and the unit therefore worked out analyses and examinations of municipal practice of significance to the citizen's due process.

The OGP action thus reflects an excerpt of Denmark's openness work, but the work is obviously not limited to that. Other efforts also aim at increasing openness and involving citizens in the administration's work, nationally as well as municipally.

For example, the municipality of Silkeborg launched 'Min Sag' (My Case) in 2017, enabling citizens to request to see information that the municipality has registered about them⁷. In many ways, the initiative resembles My Overview, which, as mentioned, is one of the initiatives in the OGP action plan 2019-2021. Another example is Aarhus Municipality that was the European Volunteering Capital in 2018 and worked out a fellow citizen policy⁸ in those regards. Finally, Hørsholm Municipality established Borgerlab (Citizen Lab) in 2019, enabling the citizens to provide input on relevant development projects in the municipality⁸.

⁸ http://www.aarhus.dk/da/aarhus/frivillig-i-aarhus/frivillighovedstad-2018.aspx

⁸ https://borgerlab.horsholm.dk/da-DK/pages/information

The municipal steps to promote openness, trust and local democracy are not limited to the examples mentioned, but the examples are meant to give a broader picture of the strong initiative passion and drive in the Danish municipalities.

Nationally, borgerforslag.dk has become a permanent arrangement at the end of March 2019⁹. In January 2019, the Danish Parliament launched the possibility of considering citizen proposals if at least 50,000 Danes entitled to vote had signed the proposal electronically. To begin with, it was a pilot scheme to expire in January 2020. At the end of March 2019, five citizen proposals had sufficient support to be considered at the Danish Parliament, and more than 300 citizen proposals had been made. Danish citizens welcomed borgerforslag.dk where more than 310,000 citizens have given their support to a citizen proposal.
